

IMPLANTABLE NEUROMUSCULAR STIMULATOR FOR THE TREATMENT OF GASTROINTESTINAL DISORDERS

Patent number: EP1331967
Publication date: 2003-08-06
Inventor: FISCHHELL DAVID R (US); UPTON ADRIAN R M (CA)
Applicant: NEUROPACE INC (US)
Classification:
 - international: **A61N1/36; A61N1/36; (IPC1-7): A61N1/36**
 - european: **A61N1/36B**
Application number: EP20010992248 20011109
Priority number(s): WO2001US49706 20011109; US20000710194 20001109

Abstract not available for EP1331967
 Abstract of correspondent: **US6591137**

A system and method for treating gastrointestinal and other disorders via electrical stimulation of plural portions of a patient's gastrointestinal tract uses an implantable control module, sensors attached to various structures of the gastrointestinal tract, and electrodes also attached to various structures of the gastrointestinal tract. Signals received from the sensors are analyzed to identify events in the gastrointestinal system, and electrical stimulation is applied to structures of the gastrointestinal tract, in sequence, to restore normal function or achieve other clinically desirable results.
